CloudForge[™]

Why CloudForge?

Instantly provision
and integrate leading
development tools

Serving over 4,000
customers & 100,000+
users

Subversion, Git & CVS
available on a single
platform

Guaranteed
99.9% Uptime

Advanced Security,
Permissions and
user control

Enterprise grade
backup & support

CloudForge™ development Platform as a Service (dPaaS) helps distributed teams and enterprise IT organizations adopt, manage and scale cloud-based development activities using a heterogeneous mix of tools, application frameworks and deployment clouds.

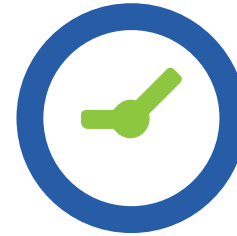

CloudForge is an easy to use platform that development teams can instantly provision and integrate their tool stack of choice; including hosted tools like Subversion® (SVN), Git, Trac, Bugzilla and TeamForge®; and integrated applications like Atlassian JIRA, Basecamp and Rally Software. Administrators gain a single-pane view of cloud resource consumption, activities, project progress, and critical data needed to manage team-based development. CloudForge's enterprise-grade platform services ensure data is secure, highly-available and backed-up, allowing organizations to code, connect and deploy software applications within a hybrid mix of public, private and on-premise cloud environments.

key benefits

“Our developers always have access to their source code, no matter where they are located We don't have to worry about backups, uptime, the system is always there”

Tien Tzou,
Founder & CEO, Zuora

Start in Minutes: Create and Customize your Development Environment

- Instantly provision best-of-breed SCM, trackers & ALM tools
- Create team collaboration workspaces, tools and data

Open & Agnostic Technology Development

- Freedom of choice to use the source code management system that meets your needs (SVN, Git or CVS)
- 100% technology, framework & PaaS agnostic

Visibility & Control of Your Global Development Operations

- Elastically scale and manage identities, teams, projects and processes across your organization
- Gain visibility with real-time dashboards, reporting center and activity feeds

key benefits

Cloud Deployment to your Public and Private Run Cloud

- One-click deployment to any public or private runtime environments
- Built-in deployment recipes for leading IaaS/PaaS

Enterprise Grade Platform Services

- Advanced Role Based Access Control (RBAC) and security management
- High availability (99.9% SLA) and full failover platform including backup services

“CollabNet CloudForge supports 600+ developers and is the most important component of our infrastructure. It has become the core of my business operations.”

Rahul Subramaniam,
Managing Director, gDEV

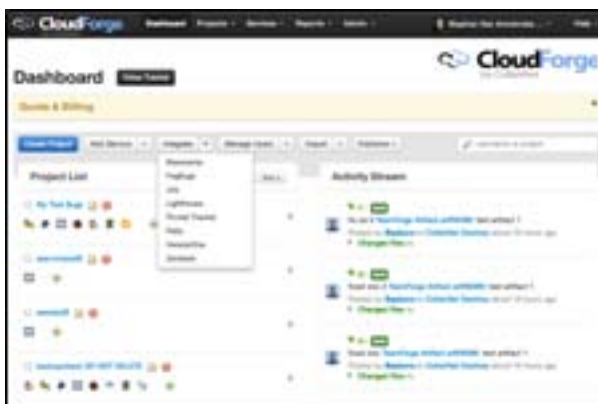

Integrate CloudForge with Your Existing ALM Process & Systems

- Integrate and leverage your existing agile and project management assets
- Gain traceability into your project management tools by auto updating tickets and artifacts directly from your code commits

key features

Dashboard: Clear overview and insight into your development projects and CloudForge™ account

Project Selector: Quick view into all your projects; Services, tools and activity. Perform your most frequent activities without having to leave the dashboard

Hosted Services

- Secure hosting of version control software – Subversion (SVN), Git and CVS hosting
- Wiki, Issue Management & Bug Tracking – Bugzilla, Trac
- Agile Application Lifecycle Management; Code browser, tracker, wiki, file sharing, forums and more – CollabNet TeamForge Project
- Hosted Network Storage – WebDrive

Integrations

- Agile/Development tools including FogBugz, Rally, JIRA, VersionOne
- Project management apps including Basecamp, Pivotal Tracker, Lighthouse
- Help Desk including Zendesk
- API Access and Web Hooks API

Deployment

- FTP or SSH deployment to your target of choice
- Out of the box recipe templates for deployment to Amazon, CloudFoundry, Force.com, Joyent, Google App Engine

guaranteed uptime
99.9%

Security and Permissions

- Role Based Access Control (RBAC) to manage fine grain permissions across all projects, services and Users
- IP Whitelisting; Customized password policies; Encrypted access (SSL)

For more security information: <http://www.cloudforge.com/security/>

Backups and Recovery

- Automated offsite backups every 10 minutes
- Schedule custom, automated backups to a destination of choice (Cloud or onsite)
- Full Failover infrastructure with 4x Global Data Centers

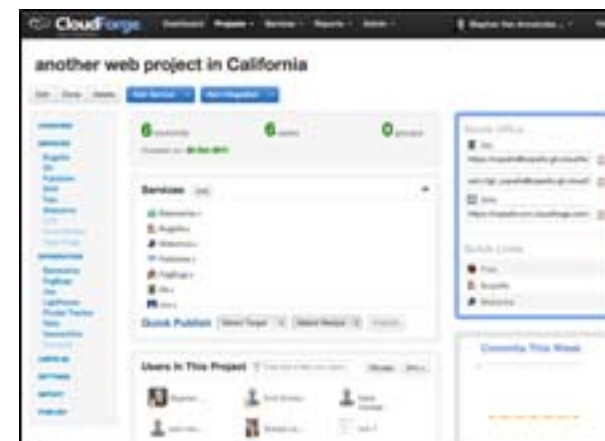

Enterprise-Class Support and SLAs

- Support engineers available 24x7 across all time zones
- Online knowledgebase, video tutorials and community
- Guaranteed 99.9% Uptime SLA
- Free personalized on-boarding consulting (for Business/Enterprise Plans)

4x full failover infrastructure

key features

Service Selector: Easy to use service selector allowing you to select and provision single or multiple tools at once

Project Workspace: A single, clear project workspace providing easy insight and configuration of your tools and services

What is a development Platform as a Service (dPaaS)

Mobile, web, collaboration, and social apps have exploded, and PaaS/IaaS vendors like Amazon, CloudFoundry, and Force.com are now first-class citizens alongside Enterprise IT. Agile development organizations typically leverage a heterogeneous mix of processes and on-demand tool stacks, to collaborate with teammates and deploy to production.

dPaaS helps embed cloud-based development and PaaS deployment within a framework for managing the application lifecycle. It provides the broadest range of hosted tool services, platform services, integration services and deployment services available.

save over
3,000 
developer hours

The CloudForge ROI

On average, CloudForge customers save over 3,000 developer hours and \$160,000 in direct costs in the just the first year by moving their development to the CloudForge development Platform as a Service (dPaaS).*

Significant cost savings were found by eliminating:

- Hardware
- Software implementation
- Maintenance & Support
- Backup & Recovery

* Based on survey responses from over 200 CloudForge customers

dPaaS

Topics trending now

Many of the latest technology announcements have implications for PaaS and cloud development that will serve agile businesses everywhere.

About CollabNet

CollabNet is a leading provider of Enterprise Cloud Development and Agile ALM products and services for software-driven organizations. With more than 10,000 global customers, the company provides a suite of platforms and services to address three major trends disrupting the software industry: Agile, DevOps and hybrid cloud development. Its CloudForge™ development-Platform-as-a-Service (dPaaS) enables cloud development through a flexible platform that is team friendly, enterprise ready and integrated to support leading third party tools. The CollabNet TeamForge® ALM, ScrumWorks® Pro project management and SubversionEdge source code management platforms can be deployed separately or together, in the cloud or on-premise. CollabNet complements its technical offerings with industry leading consulting and training services for Agile and cloud development transformations. Many CollabNet customers improve productivity by as much as 70 percent, while reducing costs by 80 percent.
