Subversion Applied Workshop

Enterprises that recognize the need to make their development teams more agile often face entrenched cultural and environmental obstacles to making it a reality. CollabNet's Agile Assessment is a critical step in the process. The assessment is a formal, structured approach that follows a tested methodology proven effective in numerous customer engagements. It leverages the years of experience our consultants bring to bear on Agile projects.

Subversion Applied Workshop

The Subversion Applied Workshop is focused on formulating a process that meets an organization's needs for version control and configuration management and defining how to best utilize Subversion to meet those needs. During the workshop, use cases and software development processes will be defined which will then be mapped into Subversion best practices. At the end of the Workshop, CollabNet will provide a best practice recommendations report mapping the organization's software development processes to their ongoing use of Subversion.

Actions taken:

- Examine current software development and release management needs.
- Establish best practices on the use of Subversion that meet those needs.

Workshop Agenda Topics Include

- Repository layout
- Branching and merging
- Promotion model
- Tagging
- Access control
- Build and release management
- Workspace management
- Application/project support
- Non-developer use of repositories

Implementation

This four day engagement begins with a two day onsite workshop with up to (5) architects, configuration managers, and senior software engineers. The remaining two days are performed offsite to produce the resulting best practices report.

Duration: 4 days (2 days onsite, 2 days offsite)

Price: \$10,000

Deliverable: Subversion best practices report

Visit openCollabNet to download CollabNet Subversion and to get access to related tools, support and training resources and in-depth technical content.

Registered members of openCollabNet get additional benefits, such as:

- Subversion related extensions such as GUI clients and connectors
- Additional in-depth technical documents
- Participation in technical discussion forums
- Best practices communities
- Release and patch notifications
- The openCollabNet Technical Newsletter

About CollabNet

CollabNet is a leading provider of Enterprise Cloud Development and Agile ALM products and services for software-driven organizations. With more than 10,000 global customers, the company provides a suite of platforms and services to address three major trends disrupting the software industry: Agile, DevOps and hybrid cloud development. Its CloudForge® development-Platform-as-a-Service (dPaaS) enables cloud development through a flexible platform that is team friendly, enterprise ready and integrated to support leading third party tools. The CollabNet TeamForge® ALM, ScrumWorks® Pro project management and SubversionEdge source code management platforms can be deployed separately or together, in the cloud or on-premise. CollabNet complements its technical offerings with industry leading consulting and training services for Agile and cloud development transformations. Many CollabNet customers improve productivity by as much as 70 percent, while reducing costs by 80 percent.
