

Subversion and CollabNet

Certified Solutions and Support – Bringing Subversion to the Enterprise

Apache Subversion® has become the version control standard for geographically distributed and agile software development organizations. Enterprises are adopting Subversion to replace their legacy solutions and implement more modern agile and continuous delivery methods. But within the enterprise, corporate governance often mandates that an actual company stand behind an open source product for support and services. CollabNet is that company for Subversion.

CollabNet founded and open-sourced Subversion in 2000 to address the industry demand for a scalable and web-based SCM for the distributed enterprise.

As the founder and principal sponsor of the Subversion open source project, CollabNet offers the broadest portfolio and has the most experience implementing, hosting and managing Subversion in the industry. Through CollabNet's decade of stewardship, Subversion has gained 50% of the SCM market. Over 10,000 customers today rely on CollabNet to support their mission-critical systems. This includes many of the world's largest Subversion instances with thousands of active users and hundreds of thousands transactions hourly.

CollabNet helps enterprises cost-effectively manage Subversion repositories at the scale they require. CollabNet solutions for Subversion range from certified Apache Subversion binaries downloads to freely available Subversion management consoles to sophisticated multi-site Subversion management applications. In addition, CollabNet provides support, training and consulting services, and manages CollabNet CloudForge – the industry's leading Subversion hosting service.

CollabNet founded and open-sourced Subversion to address the industry's demand for a modern version control system, scalable and specifically geared for distributed development teams. Some of the reasons Subversion has become the most popular SCM are:

Low Cost of Ownership

Subversion's cost of ownership is low when compared to commercial systems. Not only is Subversion free to download, but deployment and maintenance costs are lower too. While other SCM systems can require as many as five administrators for every 100 developers, Subversion repositories are often maintained by a single administrator across an entire enterprise with thousands of users. Subversion's IT infrastructure requirements are also minimal and the system scales well from workgroup implementations to enterprise-wide deployments.

Ease of Use = Fast Adoption

Many version control vendors claim unique approaches to version control and modern agile development methods, but they often require extensive training to make them effective. One reason for Subversion's rapid growth and adoption is its ease of use; end-user training can be minimized to hours versus days. Subversion's widespread adoption also means that the next developer joining your company is likely to already be familiar with the system.

Why CollabNet?

- Founder and key sponsor of the Subversion open source project.
- Broadest portfolio of Subversion products, training and services.
- Proven to scale from the workgroup to the distributed enterprise with thousands of users.
- On-premise, in the public or private cloud (largest SVN hosting service).
- Grows with your needs to full application lifecycle management.
- Hybrid SCM – Manage Subversion and Git together.
- Easy to get started. Free hosted trial

CollabNet Enterprise Cloud Development

Enterprises are achieving **productivity gains** of up to 70 percent while **reducing costs** by as much as 80 percent, all with **enterprise compliance** in order.

SubversionEdge

Smarter SCM –
From the people who
brought you Subversion

- Free web and cloud-enabled Subversion platform.
- Fastest and easiest way to deploy and manage Subversion servers.
- Rapid install and live updates of certified stacks.
- Modern web UI simplifies administration and configuration.
- Extensible with REST APIs.
- Free online SVN backup with CollabNet CloudForge.
- Wide variety of enterprise support, training and service offerings.
- Download it free today www.collab.net/getSVN

Many Integration Options

Subversion integrates easily with many other development tools. Integrations are available for third party systems such as Jenkins and Hudson, HP Quality Center and IBM Rational ClearCase. You can download free open source integrations for Eclipse, Visual Studio, Subclipse, ViewVC, AnkhSVN, and pick from a range of integrations to further extend your Subversion platform at www.collab.net.

CollabNet Products and Services for Subversion

CollabNet provides a broad portfolio of products and services to meet your specific Subversion needs. Whether you prefer on-site or hosted solutions, have small or large implementations – CollabNet has the right solution for you.

Apache Subversion. Certified Binaries.

CollabNet provides predefined Subversion configurations that have proven their robustness in the enterprise. CollabNet actively certifies new platforms, and regularly executes intellectual property audit reports for Subversion, providing customers with assurance that CollabNet Subversion is enterprise-ready. Visit www.collab.net/subversion for the latest updates and information.

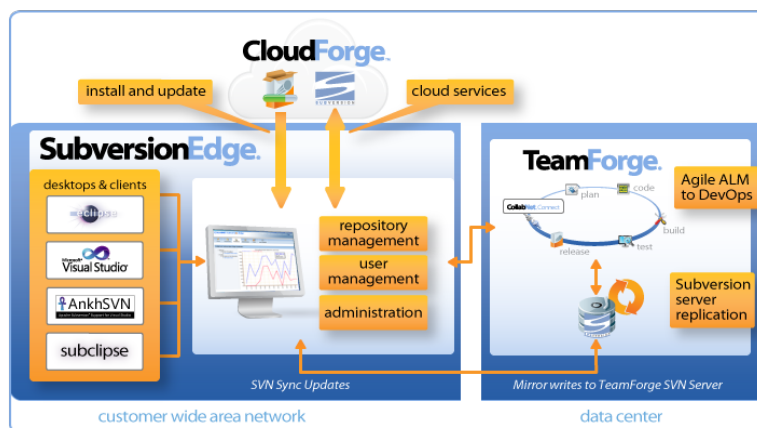

CollabNet Subversion Edge. Smarter SCM Management.

CollabNet Subversion Edge provides the fastest and easiest way to deploy and manage Subversion servers, and greatly reduces an organization's administration time and cost. Subversion Edge includes a free fully-automated installer/updater for certified software stacks of Subversion, Apache HTTP Server and ViewVC with a powerful, browser-based management interface. The graphical UI and built-in user and repository management greatly simplifies installation, administration, use and governance of the entire software stack. An update mechanism notifies users when new software components are available and wizard driven installers with 1-click updates allow users to install updates directly from a browser-based UI. Easily backup Subversion repositories, locally or online with [CloudForge](http://www.collab.net/cloudforge). Available through open source or via a commercial license, CollabNet SubversionEdge is the perfect solution for managing Subversion all the way from the workgroup to the globally distributed enterprise. Visit <http://www.collab.net/getSVN> to download today.

CollabNet TeamForge. Enterprise-grade ALM with Subversion and Git.

CollabNet TeamForge lets you integrate Subversion into your ALM tools and processes. Even more, TeamForge supports hybrid SCM – which means you can manage Subversion and Git together with one common management and security platform. All the roles, permissions and workflows you create for Subversion can be shared with your Git projects, greatly increasing collaborative development and reducing administration burdens and risk of manual error.

CollabNet TeamForge delivers on the most demanding enterprise requirements for ALM governance, security, performance, lifecycle traceability, code quality and management efficiency. Available as either an on-site or public or private hosted offering, TeamForge lets you centrally manage, federate, govern and search all of the Subversion and Git repositories across your enterprise. A graphical interface allows non-technical users to define and control granular permissions, and to manage role-based access control (RBAC) and profiles for hundreds or even thousands of users.

TeamForge enables multi-server SCM federation and replication, and integration with Continuous Integration (CI) tools such as Hudson / Jenkins. This provides a way for enterprise development teams to handle the most demanding workloads, such as those due to CI processes or frequent access via the WAN. Even more, TeamForge fosters communities, collaboration and social software development by providing an open enterprise Agile ALM platform that lets you manage development all the way from initial requirements through code, build, test, release and deploy. Learn more about TeamForge capabilities at <http://www.collab.net/getCTF>.

TeamForge adds distributed multi-server Subversion replication, enterprise Git, centralized code governance, and improved network performance, in addition to Agile ALM through DevOps across hybrid clouds.

TeamForge

Enterprise-grade ALM with Subversion and Git

- Hybrid SCM – Manage Subversion and Git together – one common management and security platform.
- Orchestrate and govern the entire ALM to DevOps process.
- Boost productivity with faster release cycles, cross enterprise collaboration and IP reuse.
- Choose from on-premise, private cloud, public cloud deployment options.
- Meets the most demanding enterprise requirements for governance, security, lifecycle traceability and scalability.
- Trial it free today www.collab.net/downloads

Join the Enterprise Cloud Development (ECD) community to collaborate, learn and innovate around all of CollabNet's products. Use the community's free workspaces to create your own, targeted ECD micro-community to develop integrations and extensions.

CollabNet World Class Support, Training and Services.

As the founder and principal sponsor of Subversion, with CollabNet you are backed by the industry's largest staffed team of commercial and open source Subversion development and QA professionals and receive the highest quality and most up-to-date software, support, training and consulting services in the industry for Subversion.

- **Support:** CollabNet offers community support as well as a wide variety of commercial support plans, including plans tailored to the most demanding enterprises (24x7, quick response, guaranteed SLAs) – to help maximize return-on-investment and minimize risks.
- **Training:** CollabNet has an unparalleled track record of success helping enterprises speed adoption, elevate productivity, enhance quality, and improve compliance within their development organization. For more information on our on-site and web-based training offerings visit: <http://www.collab.net/services/training>.
- **Services:** Our success is not an accident. It comes from a combination of world class tools, years of experience, and the best and brightest consultants in the industry. Whether you plan to deploy on-premise or in the cloud, CollabNet consultants can advise you in planning the roll out of Subversion into your organization, guide you through the deployment, configuration and migration of artifacts into Subversion, train developers during the rollout and finally assess your overall use of Subversion. <http://www.collab.net/services/implementation>.

CollabNet CloudForge. Move to the Cloud!

CollabNet has provided hosting services to over 3,500 companies since 2002 and currently has 75,000 active users. No matter how you rationalize it, you will save substantial amounts of time, dramatically reduce upfront costs and minimize risk of data loss or corruption by outsourcing to CollabNet CloudForge. For a typical 10-person team, organizations can save 3,000 hours per year. CloudForge provides ease of use, instant access to Subversion, Git and other popular development tools, secure backups to the cloud, and a way to scale or deploy applications quickly and securely. Learn more or sign up for a free 30 day trial at <http://www.cloudforge.com>.

About CollabNet

CollabNet is a leading provider of Enterprise Cloud Development and Agile ALM products and services for software-driven organizations. With more than 10,000 global customers, the company provides a suite of platforms and services to address three major trends disrupting the software industry: Agile, DevOps and hybrid cloud development. Its CloudForge® development-Platform-as-a-Service (dPaaS) enables cloud development through a flexible platform that is team friendly, enterprise ready and integrated to support leading third party tools. The CollabNet TeamForge® ALM, ScrumWorks® Pro project management and SubversionEdge source code management platforms can be deployed separately or together, in the cloud or on-premise. CollabNet complements its technical offerings with industry leading consulting and training services for Agile and cloud development transformations. Many CollabNet customers improve productivity by as much as 70 percent, while reducing costs by 80 percent.
