

Subversion Configuration and Administration Audit

Apache Subversion® has become the open source version control standard for geographically distributed software development organizations. Numerous enterprise organizations already have a substantial Subversion installed base and are actively replacing other legacy systems. Ensuring that Subversion is configured and administered in a way that optimally supports expanding and evolving development requirements is essential. Thus, CollabNet® provides Subversion auditing services.

CollabNet's Subversion Configuration and Administration Audit service will analyze a company's current Subversion set-up and validate configuration and administration practices against organizational requirements and Subversion best practices. Findings are documented in an audit report, which includes recommendations for changes and improvements for more optimal Subversion operations.

Audit Topics

The Subversion audit will assess an organization's current Subversion set-up within the following functional areas.

- Subversion binary installation (including directory structure and configuration files)
- Subversion functionality verification (on both the Subversion Server and client integration via operational checks)
- Server organization, layout and hardware
- Apache configuration
- User and permission schemes
- Authentication, authorization and security (including authentication against an external source such as Microsoft Active Directory or LDAP)
- Logs and audit trails
- Replication, backups and recovery (to determine adequacy of current processes)
- Hook scripts and external software development lifecycle tools (such as build and test tools)

Implementation

The audit can be performed onsite or remotely. Remote analysis requires access to the Subversion server.

Duration: 2.5 days

Deliverable: Subversion server configuration and administration audit report

Visit CollabNet

Visit www.collab.net to download CollabNet Subversion and access related tools, support, training resources and in-depth technical content.

- Subversion related extensions such as GUI clients and connectors
- Additional in-depth technical documents
- Participation in technical discussion forums
- Best practices information for communities
- Release and patch notifications
- Sign-up for the Technical Newsletter

Up-Skill for the Agile Enterprise

Whether training is delivered in a public setting, a private engagement, online or as interactive computer-based session, CollabNet training takes the approach that students learn best by doing.

About CollabNet

CollabNet is a leading provider of Enterprise Cloud Development and Agile ALM products and services for software-driven organizations. With more than 10,000 global customers, the company provides a suite of platforms and services to address three major trends disrupting the software industry: Agile, DevOps and hybrid cloud development. Its CloudForge® development-Platform-as-a-Service (dPaaS) enables cloud development through a flexible platform that is team friendly, enterprise ready and integrated to support leading third party tools. The CollabNet TeamForge® ALM, ScrumWorks® Pro project management and SubversionEdge source code management platforms can be deployed separately or together, in the cloud or on-premise. CollabNet complements its technical offerings with industry leading consulting and training services for Agile and cloud development transformations. Many CollabNet customers improve productivity by as much as 70 percent, while reducing costs by 80 percent.
